## PENNSYLVANIA CROP AND LIVESTOCK REPORT

1940-1941

### SECTION II

Livestock and Livestock Products  
Farm Income, Prices, Labor and Wages  
Lime, Fertilizer, Equipment, Conveniences

JOHN H. LIGHT  
*Secretary of Agriculture*

Published bi-monthly by direction of the Secretary. Entered as  
second-class matter May 15, 1940 at the post office at  
Harrisburg, Pennsylvania, under the Act of June 6, 1900.

## PENNSYLVANIA A LIVESTOCK STATE

**P**ENNSYLVANIA agriculture is predominately livestock in character, notwithstanding its widespread recognition as a producer of fruit and other cash crops, particularly potatoes, tobacco and buckwheat. The Commonwealth plays a prominent role in the Nation's dairy and poultry industries. It ranks among the four leading States in egg production and value of chickens on farms. It holds seventh place in number of chickens on farms and produces between three and four percent of all the chickens in the country. In dairying, which is its most important farming activity, the Keystone State ranks eighth among the States in the production of milk and tenth in the number of cows on farms. Both the swine and sheep and wool enterprises are represented in the farming economy. Cattle feeding, although on the decline in recent years, has been a long established practice in the southeastern sections of the State. In all, the Commonwealth presents a balanced and diversified livestock industry that is contributing importantly to victory for Democracy.

### FARM LIVESTOCK INVENTORY JANUARY 1, 1941

Livestock numbers on January 1, 1941 declined about three percent from the corresponding date in 1940. The decline was shared by all species, except cattle which continued their upward trend commenced in 1940. By far the greater decline occurred in hog numbers, which reflected the relatively low prices for pork during 1940. Decreases from 1940 for chickens and turkeys were also revealed by the inventory figures and the successive decline in numbers of workstock and sheep were further extended.

Aggregate farm value of the livestock on farms January 1, 1941 was practically unchanged from the 1940 inventory despite the lower numbers. Better prices for cattle, sheep and chickens were responsible. Only cattle reflected gains both in per animal value and in total value. Workstock declined \$12 per head from the beginning to the close of 1940.

The decrease in horses and mules on farms during 1940 was somewhat less than in 1939. Stallions registered in 1940 by the Bureau of Animal Industry of the Pennsylvania Department of Agriculture numbered 438 compared with 453 in 1939. There has been no increase in the number of colts in the past few years. A marked increase in tractor sales during 1940 was reported.

The large number of dairy calves and heifers held over from 1939 and a lower rate of culling brought cattle numbers on farms to the highest inventory in the past twenty years. Further increase in cattle numbers was also clearly indicated by the large number of calves and heifers not of milking age that were being wintered over. Fewer cattle were on feed, as indicated by lowered inventory numbers and smaller in-shipment records. Milk production during 1940 increased four percent over the previous year as a result of the addition of 12,000 cows to milking herds and 140 pounds increase in the average production per cow.

The number of hogs on farms was reduced seven percent during 1940 but the total figure was still higher than any of the years in the preceding decade except 1939. Low prices depressed by heavy supplies was an important factor in reducing the size of the pig crops.

The number of sheep continued to decline and reached a new low point in the 74 years of records. The farms of the State also showed four percent fewer chickens and ten percent fewer turkeys when compared with the totals at the beginning of 1940.

### FARM LIVESTOCK INVENTORY JANUARY 1, 1942

Total combined farm inventory numbers of the five livestock species on Pennsylvania farms at the beginning of the year were practically unchanged from a year previous, although classes showed divergent trends. Sharp increases in numbers of dairy cattle and sheep were contrasted by decreases in swine and workstock numbers. The farm flocks of the State contained seven percent more chickens, while turkey numbers increased 31 percent, the sharpest gain in 12 years, to reach the highest numbers on record for the Commonwealth.

Aggregate farm inventory value of the five species of livestock jumped 21 percent over the corresponding inventory value in 1941. Values per head of all species except horses and mules were much higher at the beginning of 1942. Sheep and lambs made the most spectacular gain in value per head with a raise of 64 percent. Other changes in value per head compared with last year were increases of 29 percent for cattle, 41 percent for hogs, 16 percent for chickens and 23 percent for turkeys, and a decrease of about 15 percent for horses and mules. Most of the gain in inventory valuation over the previous year was contributed by dairy cattle but all classes except work animals were affected by the rising price level during the year as the country prepared for war.

The decrease in horses and mules was accelerated during the year and was the greatest in the last ten years. Receipts of horses and mules at Pittsburgh were 40 percent less in 1941 than in 1940. Stallions registered in 1941 by the Bureau of Animal Industry numbered 396, compared with 438 in 1940 and 453 in 1939.

The number of cattle and calves on farms January 1, 1942 was two percent greater than a year earlier and seven percent above the number on hand during the first World War. The increase over a year ago was almost entirely due to the greater numbers of dairy animals. The upward swing of the cattle cycle seems likely to continue as the number of yearling heifers and calves kept for milk cows was greater than at any time in the past dozen years.

Under the Food for Victory program and the stimulus of Government Lease-Lend Purchases producers have been encouraged to increase their output of milk and eggs. Production of milk in 1941 for Pennsylvania was the highest in twenty years. This greater milk output from farms was obtained by enlarging dairy herds by about 22,000 additional milk cows and a better average production per cow. On the average, feeding rates of grains and concentrates per cow in herd were at top levels and established new peak records for the State.

Swine numbers declined another seven percent during 1941 due to smaller pig crops and the marketing of hogs over six months old other than breeding stock. The combined 1941 spring and fall pig crops were 60,000 head below the 1940 crop.

Sheep numbers increased four percent between the two first of the year inventories. The successive yearly decline in sheep and lambs since 1937 was halted as wool and mutton prices became more favorable. Wool production was off five percent from the 1940 clip.

Twelve percent more chickens than in 1940 and the largest number of turkeys on record were raised in 1941. Monthly rates of egg production per layer attained new records during the season. The trend toward smoothing out the seasonal variation in egg production was again evident throughout the year.

TABLE 1 - LIVESTOCK: AGGREGATE VALUE OF 5 SPECIES\*, BY STATES, JANUARY 1, 1931-40, 1941 AND 1942

State and division	1931-40 Ave.	1941	1942
